

# THE SCIENCE OF FIRE PROTECTIVE FOOTWEAR

## LOCK-FIT ANKLE SUPPORT SYSTEM™

Lock-Fit is an integrated anatomical ankle padding system that insures the foot is securely positioned within the boot, helping to prevent common foot injuries. Lock-Fit also provides support to the entire ankle area for increased wear comfort.

## PIERCE-PROTECT ARCH PROTECTION SYSTEM™

Pierce-Protect uses an advanced ballistic-grade composite material to provide multidirectional puncture protection to the vulnerable arch area of the foot. Highly flexible, Pierce-Protect moves with the foot to maintain comfort and mobility.

## CROSSTECH® FOOTWEAR FABRIC

CROSSTECH footwear fabric is a fabric technology that offers the most durable liquid penetration resistance against blood, bodily fluids, NFPA common chemicals and water. It also delivers superior thermal protection. The breathability of CROSSTECH footwear fabric allows perspiration vapor and moisture condensation to escape the footwear, keeping feet drier and more comfortable.

## VIBRAM® FIRE & ICE OUTSOLES

Slip-resisting Fire & Ice outsoles provide superior traction and durable performance at extreme temperatures. Developed for the military by STC and Vibram, Fire & Ice outsoles combine a special blend of unique polymers that protect your feet inside and out.
